IVAN SKVORETS

FULL STACK DEVELOPER (JAVA / SPRING BOOT)

Location: Minsk, Belarus | **Email**: wolllip09@gmail.com | **Telegram**: t.me/wolllip | **GitHub**: github.com/wolllipp
Languages: Russian (native), Belarusian (native), English (B2+)

PROFESSIONAL SUMMARY

Full Stack Developer with 2.5+ years of experience building backend systems on Java / Spring Boot and client apps on SvelteKit. Focused on fault-tolerant REST APIs, relational data modeling under high concurrency and production reliability. Reverse-engineered the undocumented GWT-RPC protocol of the Belarusian state registry (egr.gov.by) and turned it into a working document-generation integration. Delivered a workflow platform that is used in production by a real organization.

CORE SKILLS

- **Backend:** Java, Spring Boot (Security, Data JPA, MVC), Hibernate, JWT, REST API, Node.js / Express, SOLID, OOP
- **Frontend:** JavaScript (ES6+), TypeScript, SvelteKit / Svelte 5, React, HTML/CSS, Sass, Figma
- **Databases:** PostgreSQL, MySQL, Redis, MongoDB, Flyway, Liquibase, Prisma
- **DevOps:** Docker, Docker Compose, CI/CD (GitHub Actions), Maven, Git
- **Testing:** JUnit 5, Mockito, end-to-end testing

PROFESSIONAL EXPERIENCE

Full Stack Developer (Internship) – BLACKROCKET **Jun 2026 – Jul 2026**
Web app that generates a complete document package for registering a sole proprietorship, LLC or private unitary enterprise in Belarus in minutes.

- Designed the SvelteKit frontend architecture: component structure, state management, routing between forms.
- Built multi-step forms with client-side validation and field logic driven by registration type.
- **Reverse-engineered the undocumented GWT-RPC protocol of egr.gov.by** and built an integration with typed error handling and automatic server-method detection.
- Added health checks and a diagnostics screen to track external API failures; removed redundant re-renders and added lazy loading.

Stack: TypeScript, SvelteKit, Svelte 5, MongoDB, REST API, GWT-RPC, Figma

Backend Developer – FCAD Student Council, BSUIR (fcadbot.site) **Sep 2025 – May 2026**
SaaS platform (lightweight CRM/BPM) digitizing request submission and approval workflows; in production use by the Faculty of Computer-Aided Design.

- Designed RBAC for three user groups with permissions at action and request level.
- Built an extensible document workflow engine: routing, multi-stage approval, rejection and archiving; new request types added without touching core logic.
- Designed the PostgreSQL schema with change auditing and full decision history for incident review and compliance.
- Integrated Telegram Bot API for real-time notifications, **cutting staff response time by 40%**.
- Took the system to production and supported it: incident handling, iterative improvements based on pilot-user feedback.

Stack: TypeScript, Node.js, Express, React, PostgreSQL, Prisma, Telegram Bot API, Docker

Full Stack Developer – Atelier Order Management System (pet project) **Nov 2024 – Jul 2025**

- Built a RESTful Spring Boot backend secured with Spring Security and RBAC for clients, staff and admins.
- Designed a normalized PostgreSQL schema with constraints and indexes; wrote complex SQL and versioned Flyway migrations for reporting and search.
- Containerized the app with Docker Compose; configured dev/test environments via Spring profiles; added async email notifications (JavaMail).

Stack: Java, Spring Boot, Spring Security, Spring Data JPA, PostgreSQL, Flyway, Docker, JavaScript

Backend Developer – Coworks Booking API (pet project) **Feb 2024 – Sep 2024**

- Eliminated booking race conditions at DB level with a PostgreSQL **EXCLUDE USING gist** constraint instead of application-only checks.
- Implemented JWT auth with a custom filter and 4-role access model; global exception handling via @RestControllerAdvice.
- Used Redis to cache hot data and rank popular spaces, reducing PostgreSQL load; covered booking logic with JUnit 5 / Mockito.

Stack: Java, Spring Boot, Spring Security, PostgreSQL, Redis, Flyway, JWT, Docker, JUnit 5, Mockito · github.com/wolllipp/coworks_project

ACHIEVEMENTS

- **Scholarship:** High-Tech Park (HTP) scholarship recipient
- **Leadership:** Chairman of the FCAD Student Council, BSUIR
